

Recession Timeline: 1854–2026

Episode Duration: Recession vs Expansion

- The current expansion cycle has lasted 74 months (since May 2020) — shorter than the average expansion since the 1980s (~85 months), but noticeably longer than the average post-war expansion since 1945 (~64 months)
- Average expansion length increased by nearly a third after the 1980s compared to the earlier post-war period (85 vs. 64 months) — consistent with an era of more active macroeconomic management (Fed policy, fiscal measures) that has meaningfully extended growth phases.
